

B2B Cloud Services

Company Overview

UpNet Technologies, Inc. was founded in 1996 by Jennifer Amys and Vicki Crowley to help companies more cost effectively manage their growing transaction volume, complexity and business pressures associated with their EDI systems. With over 50 years of combined market experience they quickly realized that existing technology could not meet the market needs for speed, cost, or transparency. After two years of research and development, UpNet unveiled iEDeX, a truly innovative event-based data collaboration technology, which has started to change the standard approach to integration and data transformation solutions.

Industry Leaders

UpNet Technologies is lead by Jennifer Amys and Vicki Crowley. Jennifer Amys, Founder and CEO, has a successful track record of driving complex ERP and technology initiatives within Fortune 500 companies. Prior to co-founding UpNet, Amys held the position of CIO for the previous 10 years at Rockwell Automation and C.H. Robinson Worldwide Inc. Vicki Crowley, Founder and Vice President of Product Strategy, is one of the pioneers of electronic data exchange and has seen it grow from mainframes, through PC's, and onto the Internet.

Certification

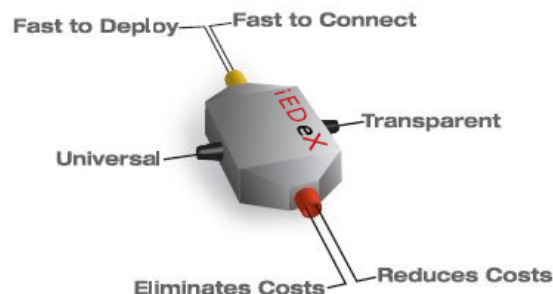

UpNet is a certified member of the Minnesota Minority Supplier Development Council (MMSDC) and the Women's Business Enterprise National Council (WBENC). UpNet is also a Microsoft and IBM Certified Business Partner.

Innovative Technology

UpNet's underlying technology is iEDeX, an innovative technology developed to facilitate data integration and data transformation. In addition to business process integration, iEDeX provides a real-time universal platform for B2B collaboration of event-based data. This true many-to-many network service securely transfers data in near real-time. Utilizing an integrated process and platform, iEDeX first deconstructs the data into its most basic form, translates it into a universal language, and finally connects the data to any receiving system. This flexibility allows iEDeX to move at the speed of your business.

The Unique Features of iEDeX Technology

UpNet's iEDeX platform as a service (PaaS) leverages a suite of business applications to enable process management and collaboration. Currently the suite includes order management, logistics network manager, customer purchasing gateway, supplier relationship manager, business analytics, and status 411. The suite provides automation to your business, creating increased efficiency and effectiveness through control and compliance.

Proven Success

Today we process over 30 million business transactions per month with international corporations, "big box retailers" and small to mid-size companies with diverse technical capabilities. Our iEDeX technologies simplify companies supply and demand chain processes, deliver significant savings and increase their competitive advantage.
